

Stepan

Investor Presentation

Presented at KeyBanc Basic Materials and
Packaging Conference

Current as of September 9, 2014

Core Components of Stepan's Strategy

Cautionary Statement

Except for historical information, all other information in this presentation may consist of forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. These forward-looking statements are subject to risks and uncertainties that could cause actual results to differ materially from those projected, anticipated or implied. The most significant of these uncertainties are described in Stepan Company's Form 10-K, Form 8-K and Form 10-Q reports and exhibits to those reports, and include (but are not limited to), prospects for our foreign operations, foreign currency fluctuations, certain global and regional economic conditions, the probability of future acquisitions and the uncertainties related to the integration of acquired businesses, the probability of new products, the loss of one or more key customer or supplier relationships, the costs and other effects of governmental regulation and legal and administrative proceedings, including the expenditures necessary to address and resolve environmental claims and proceedings, disruptions in production at manufacturing facilities, volatility of raw material and energy costs, maintaining and protecting intellectual property rights, interruption or breaches of information technology systems, disruptions in transportation or significant changes in transportation costs, and general economic conditions. These forward-looking statements are made only as of the date hereof, and Stepan Company undertakes no obligation to update or revise the forward-looking statements, whether as a result of new information, future events or otherwise.

Stepan Company Profile

2013 Sales

- \$1.9B in Sales
- 3 Reportable Segments
- 17 manufacturing sites with operations in 12 countries
- 2000 employees
- Traded on NYSE as “SCL”

Stepan Company Profile

5 years of record earnings prior to 2013

* = Net Income excluding deferred compensation income or expense is a Non-GAAP measure (see reconciliation in the appendix)

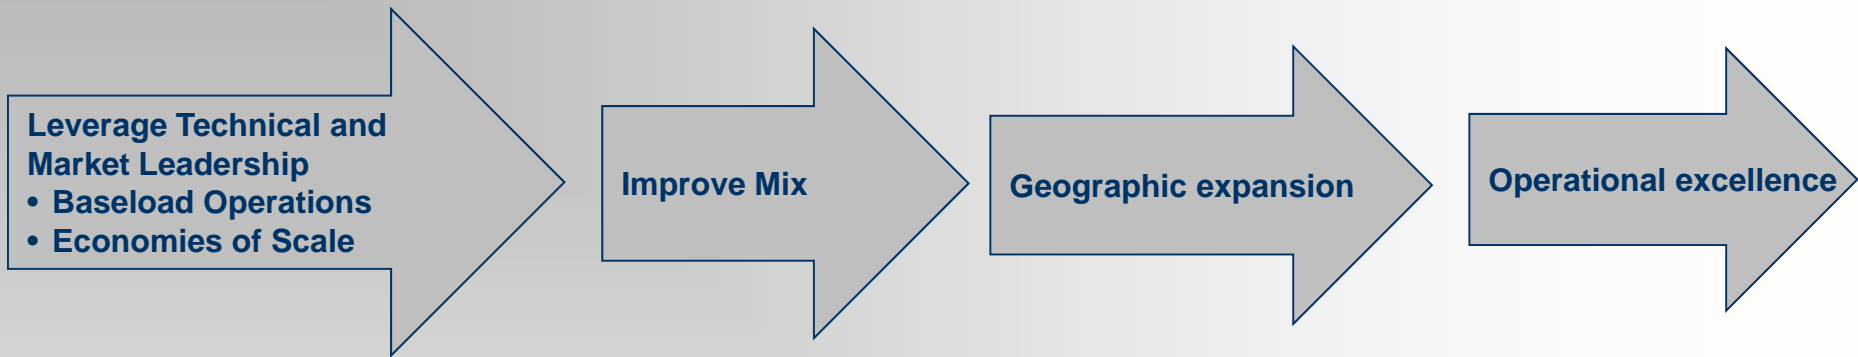

Operating Income

2013 = \$166MM

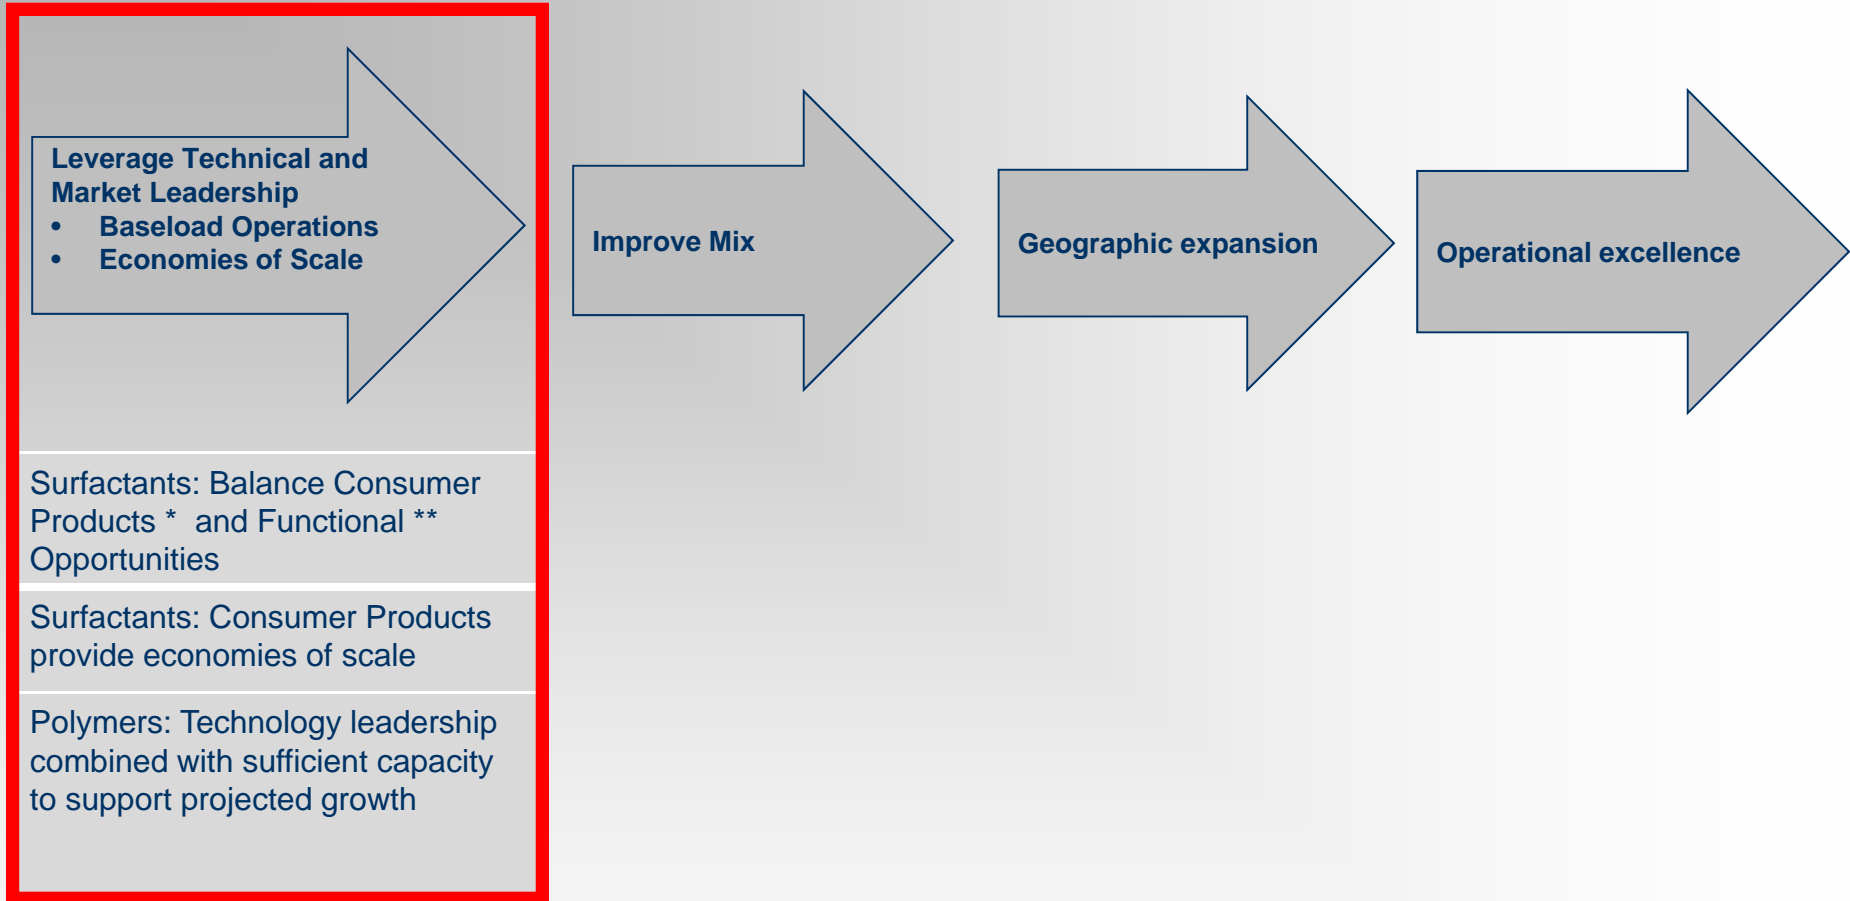

Polymers contributes a higher % of Operating Income relative to % of Sales

Core Components of Stepan's strategy

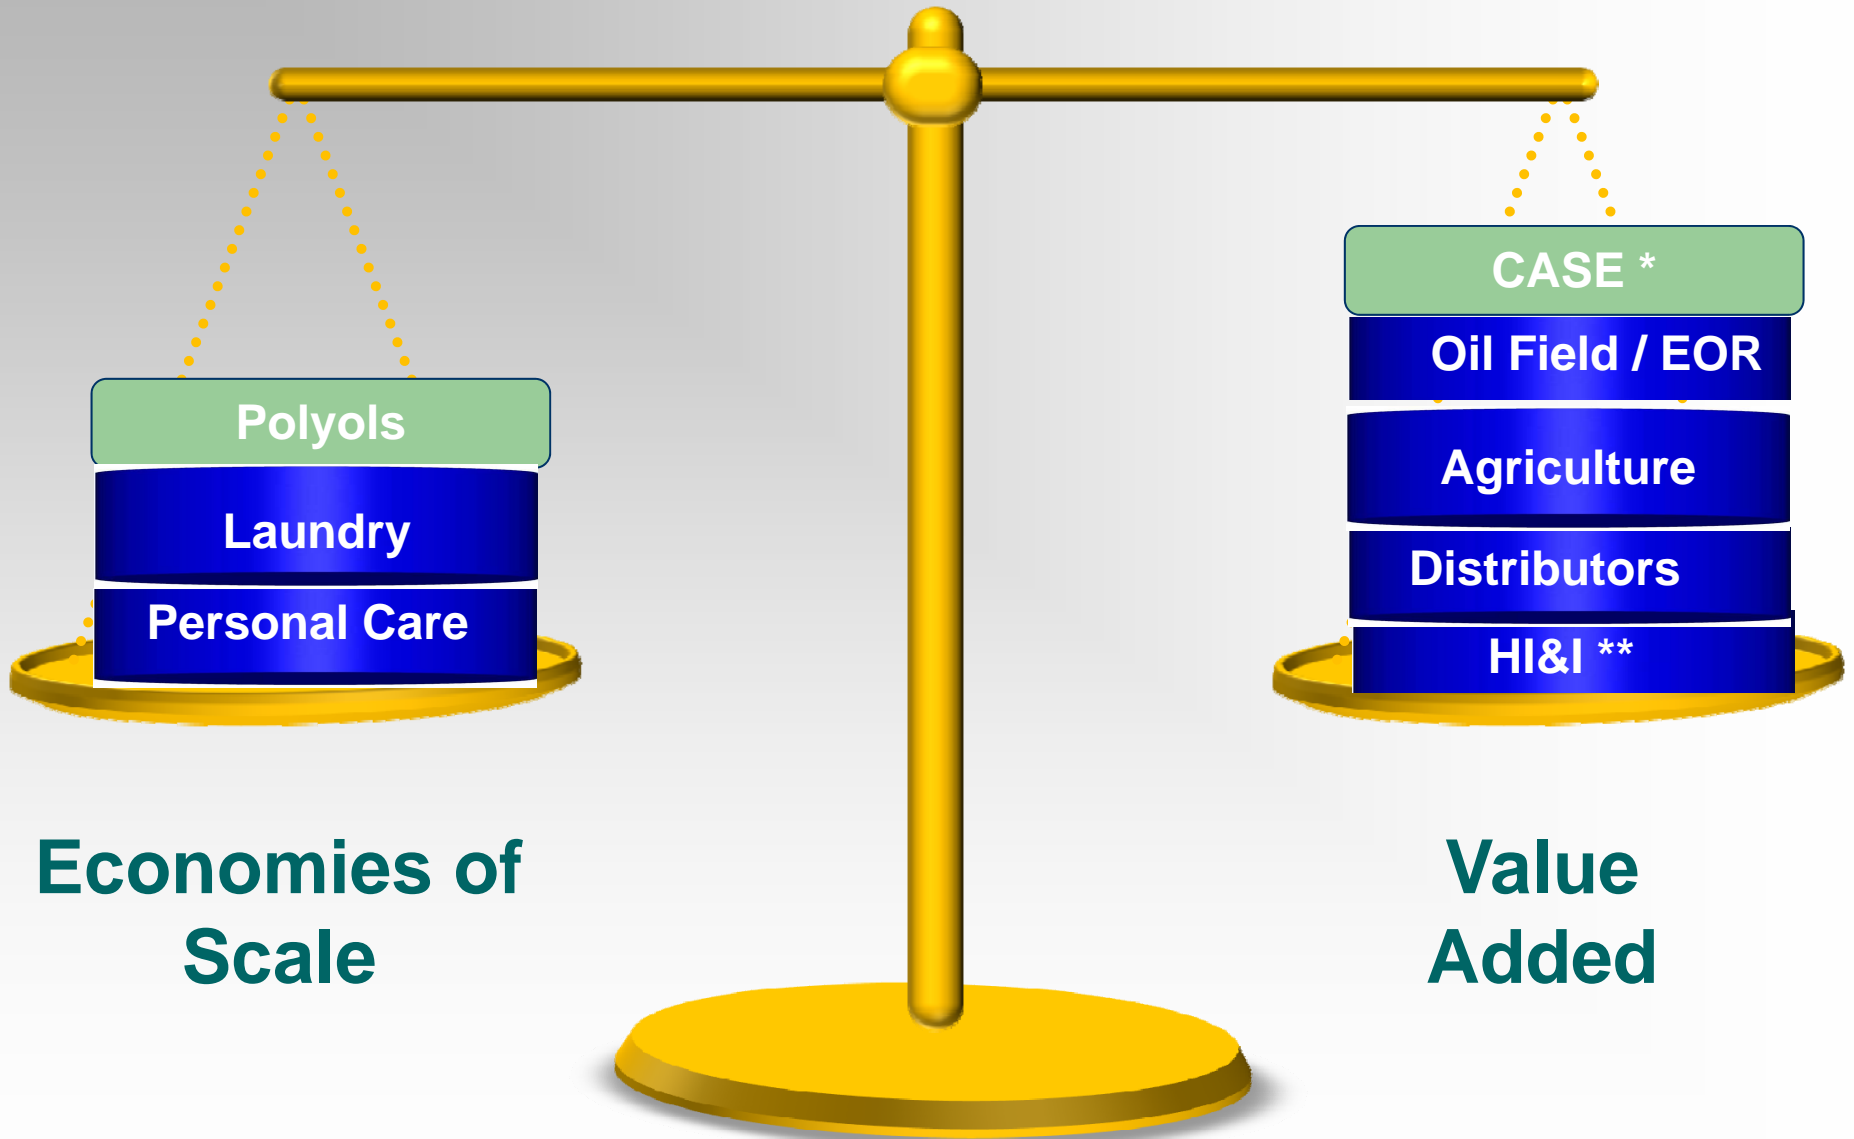

Core Components of Stepan's strategy

* Consumer Products = Personal Care and Laundry

** Functional Surfactants have uses other than cleaning

A balanced approach is integral to growing earnings

Economies of Scale

Value Added

* CASE = Coatings, Adhesives, Sealants, Elastomers

** HI&I = Household, Institutional, and Industrial

2014 June YTD Sales

Strong Polymers growth, decline in Consumer Products

Sales in \$MM USD

	<u>1H Comment vs. PY</u>	<u>Expectation</u>
Polymers	Differentiated product along with strong macro factors	Generally continue
Functional	Down (slow Ag*)	Ag* NA down year; Brazil expected to improve 2H
Distributors	Flat	Generally continue
Institutional & Industrial	Flat	Generally continue
Consumer Products	Down (lost laundry business)	Will remain down vs. 2013

Operating Income (OI) % of Sales	
Polymers = 11%	Potential for OI% expansion as Polymers grows
Surf = 6%	

*Ag = Agricultural

The Consumer Products decline more than offset Polymers growth

North America Laundry is a large contributor to the 2014 June YTD Consumer Products decline

Surfactant use per load has declined

Source: Internal Stepan analysis
2014 and beyond is a forecast

Impact on Stepan

- Excess Sulfonation capacity
- Remaining Anionic Laundry business:
 - under long-term contracts
 - customers are not backward integrated

Stepan opportunities

- New laundry business
- Enhanced Oil Recovery (EOR) Surfactants
- Or additional sulfonation rationalization

Over time Surfactants use per load has declined due to:

- Increased use of enzymes
- Reduction in actives as Consumer Product companies concentrate products
- End consumer trading down from Premium to Economy products which use less Surfactants

Our other high volume business is Polyols for insulation

Energy efficiency is a key growth driver (Government mandated and consumer preference)

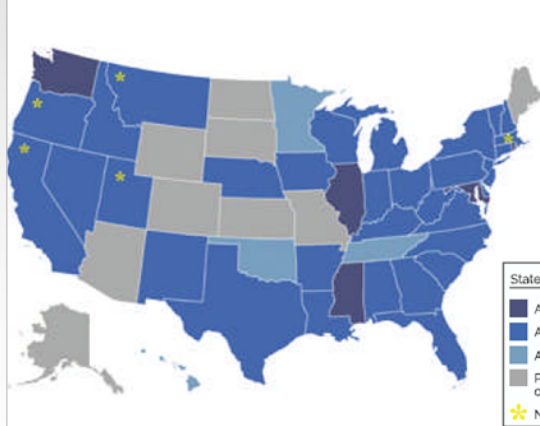

History of U.S. Energy Code Improvements

(DOE Building Energy Codes Program)

Since 1989, the energy use index has declined by 60% per the commercial codes

Commercial Code Status AS OF JANUARY 2014

 In one year, 3 new states have adopted the 90.1-2010, and 3 states plan to update their energy codes.

Source: ASHRAE = the foremost source of technical and educational information, and the primary provider of opportunity for professional growth in the arts and sciences of heating, ventilating, air conditioning and refrigerating

From 7 to 38 states in the two most stringent standards

While Europe is in the lead, US states have been consistently increasing energy standards (and many are still catching up)

In addition to energy efficiency, there are other growth factors for Polyols for insulation

- Potentially returning growth in commercial construction in North America
- Conversion to metal panels in Europe
- China

Capacity is in place to support the growth in North America and Europe

Planned capacity being built in China

Core Components of Stepan's strategy

Prior to 2014 - Increasing sales in higher end products

Growth from

- Functional Surfactants with focus on Agriculture and Oil Field
- Polymers through Polyols and CASE

Global Agriculture presents an attractive opportunity for growth

- Global Agriculture remains very attractive despite recent headwinds
 - 2014 becoming a difficult year industry-wide but not expected to repeat

- Global population growth expected from 7 to 9 billion by 2040 *
- Income growth in emerging middle class expected to drive greater protein demand
- 70% increase in crop production required

Chemistry will be part of the solution

** Source: United Nations Department of Economics and Social Affairs and Phillips McDougal Agrireference Report (Sales Performance in 2012) dated December 2013*

Oilfield is the broader category - Enhanced Oil Recovery (EOR) is within Oil Field

2040 Projected Energy Mix

Projected Energy Mix: Adopted from ExxonMobil "The Outlook for Energy: A View to 2040" © 2013

* US Department of Energy, April 2005
 ** Innovative Energy Technology Program (IETP)
 *** US Department of Energy
 **** Internal analysis

Surfactant Applications

- Oil Sands
 - Bitumen Dilution
 - Rig/Equipment Cleaning
 - Tight/Shale Oil and Gas
 - Flow Back Modifier
 - Friction Reducer
 - Biocides
 - Enhanced Oil Recovery
 - Mobilize Trapped Crude
 - Estimated 1.33 Trillion barrels of "stranded" oil in the US *
 - Estimated 9.5% of oil recovered from EOR (126 Billion barrels) **
 - 20% eligible for Enhanced Oil Recovery techniques (25 billion barrels) ***
 - 4-7 pounds of surfactant used per barrel (100-175 billion pounds of EOR surfactants) ****
- Water Treatment
 - Emulsion Breakers
 - Gellants
 - Stimulation Foamer

Potentially big opportunity with capacity currently in place

Entry into CASE diversifies Polymers beyond commercial roofing

CASE is attractive to Stepan:

- Growth opportunities
- Diversification
- We bring unique know-how in specialty applications in Polyurethanes

Stepan strategy in action

- Columbus, Georgia acquisition in May 2013 diversified our Polyol offering and “should accelerate our growth in CASE and PUSH *”
- On track to deliver \$6 - \$8MM incremental Operating Income in 2014

* PUSH = Polyurethane Systems House

Core Components of Stepan's strategy

Getting “Big in Brazil” is a core component of our strategy

- We believe Brazil provides the right combination of
 - Consumer surfactant drivers
 - Opportunities to grow in Agriculture and Oil Field
 - Brazil is the 5th most populous country with a large and growing middle class *
 - Consumer product market is evolving toward developed country standards (“Universal Consumer”)
 - Should drive growth in Powder and liquid detergents and liquid personal wash
-
- Brazil has the most farmable land in the world **
 - Brazil can produce far more food than its population needs ***
 - The world will need a global food system ***
 - Brazil will ship food to other parts of the world ***

Growing in Brazil is a core component of our strategy

* Source: World Population Review March 23, 2014

** Source: Phillips McDougall Agrireference Report (Sales Performance in 2012) dated December 2013

Brazilian Laundry Product Evolution

Surfactant use increases with each phase → to Powders → to Liquids

■ Bar ■ Powder ■ Liquid ■ Pod

Surfactant Use Per Load

Source: Internal Stepan analysis
2014 and beyond is a forecast

Brazil presents a growth opportunity in Consumer Products

Growing Polymers in China is also key to our strategy

China is a large, growing market for insulation

- Chinese Government is mandating greater energy efficiency throughout economy and more use of insulation
- Significant MDI* investment in China which is reacted with Polyol to make insulation

SCL History in China

- 2005 start up of Polyol plant
- 2013 Government mandated plant shut-down
- 2013 SCL had \$2MM of additional costs to shut-down plant and establish interim supply chain
- SCL on Q4 2013 Earnings Call → We plan to build a new plant
- SCL on Q2 2014 Earnings Call → We signed EPC** contract;
Expected operational in 2016

* MDI = Methylenebisphenylene
Diisocyanate

** EPC = Engineering, Procurement
and Construction

We plan to accelerate our participation in what we expect will be the largest Polyol market in the world

Global MDI Capacity

Thousand Metric Tons

MDI Producers are making big investments in China with \$6B invested in capacity

Source: Tecnon Orbichem report - October 2013

Stepan is not an MDI producer

Core Components of Stepan's strategy

Operational Excellence

Q4 2013 Booked Restructuring Reserve

- Reduces capacity in North America sulfonation
- Relatively small but “indicative”
- On target to save \$2.5MM / year

Q2 2014

- Launched formal program, utilizing internal and external resources to Improve efficiency and profitability
- Plan to communicate more information later in 2014

Strong Balance Sheet

Key Covenant Metrics	Most restrictive	Calculations per 2013 10-K
Interest Coverage	2	10
Net Worth	\$325MM	\$552MM
Total Debt / Total Capital	Max is 55%	33%

A lot of room to use balance sheet to drive growth

Cash Priorities

- Drive earnings growth and geographic expansion through measured use of capital spending
- Spend to improve efficiencies
- Pursue further innovation through differentiated products
- Continue increasing the dividend

Leveraging the Balance Sheet to drive future earnings growth

Recent key investments

R&D facilities in Brazil, China, and France

Surfactants

US - Specialty surfactants

Brazil - Neutralization capacity

Asia - Singapore Methyl Ester plant

Polymers

Europe - Polyol for roof / metal panel

US - Specialty CASE Polyol

In progress investments

Surfactants

Brazil - 2nd neutralizer

Brazil (Bahia state) acquisition

Polymers

China - New plant for roof / CASE

Investment priorities aligned with strategy

Dividend legacy

Symbol	Company Name	Increased Since
DBD	Diebold, Inc.	1954
